DESCRIPTION
Ultrafine cementitious grouts are composed of a finely ground mixture of Portland cement, pumice pozzolan, and dispersant. Avanti’s Ultrafine grout has an average particle size of three microns, in stark contrast to typical particle sizes of 60 to 70 microns in conventional cements. Ultrafine VX grout is formulated with a polycarboxylate based superplasticizer for minimal bleed and high compressive strengths in soil permeation applications.

APPLICATION
- Stabilizing weak soils
- Sealing seepage in mines, dams, and tunnels
- Low permeability grout curaining
- Hazardous waste containment
- Oil well squeeze cementing

FEATURES AND BENEFITS
- Smaller particle size will penetrate smaller fractures and finer soils
- Stable North American source of supply
- Composed of non-hazardous materials
- Lower permeability, means reduced hydraulic conductivity and extended longevity when compared to ordinary Portland cement.

GROUTING TECHNIQUES
- Probe Grouting
- Curtain Grouting

HOW IT WORKS
The chemical synergy created by combining OPC with highly reactive natural pumice pozzolan and polycarboxylate-based superplasticizer allows for a confident design with minimal bleed and high compressive strengths.

OPTIONAL ADDITIVES
- Additional additives may be used based on contractor field tests and project parameters.

PACKAGING
- Standard packaging is in 44 lbs. (20 kg) bags or 2,000 lbs. (900 kg) Super Sacks.

SHIPPING
- Motor Class 55
- Non-Hazardous
- Air freight is NOT available.

MIX PROCEDURE
These precise mixing instructions must be followed for best results:
1. Mixer should be a high-shear “colloidal” mixer.
2. Recommended Water/dry grout ratio is 0.8/1 by weight.
3. Add water to mixer and set unit on high speed.
4. Add pre-determined amount of PC based superplasticizer to water
5. Slowly add dry grout to mixer.
6. Mix at high speed for two to three minutes.

CLEANING PRODUCTS
Use water with light detergent.

PROPERTIES – DRY
- Superplasticizer**: 0.125% by weight
- Color: Cement gray
- Particle Size: 90% < 8 microns, average 3 microns
- Surface Area: 15,110 cm²/g
- Loose Unit Weight: 0.497 grams/cc
- Specific Gravity: 2.70 grams/cm³
- Dry Weight/Wet Volume: 1.01 kg/liter

PROPERTIES – WET (With Addition of .9% USG Super by Weight)
- Water/Dry Grout**: 0.8/1 by weight
- Specific Gravity*: 1.54 grams/cc
- Initial Viscosity*: 33 – 37 seconds
- Internal Cohesion*: 1.22 Pascals
- Initial Gelation*: 2.5 – 5.0 hours
- Final Gelation*: 4.5 – 7.0 hours
- Initial Vicat Needle Set*: 9.33 hours
- Final Vicat Needle Set*: 9.83 hours
- Period of Workability*: 2.5 – 5.0 hours
- Shrinkage*: -0.0260%
- Bleeding*: 0.50%
- Hydralitical Heat*: 31°C
- Pressure Filtration*: 0.100 – 0.103 min⁻¹/²
- Sulfate Resistant: Resistant to attack
- Permeability*: 1x10⁻¹⁰ cm/sec

*Varies with water/cement ratio and superplasticizer content

PERFORMANCE
This grout is thixotropic which means it will become stiff if allowed to remain at rest. This is true of all ultrafine cement grouts. The material will re-liquefy when a pressure slightly in excess of the materials internal cohesion is applied. In practice, the grout is kept in motion through the use of a continuous loop grouting setup.

STORAGE
Store in sealed bags only. Partially used, open bags will take on ambient moisture. Product should be stored in a covered, dry area to avoid exposure to moisture. There are no specific ambient temperature restrictions for storage, however, sudden dramatic changes in temperature that may promote moisture condensation should be strictly avoided.

SAFETY
Always use OSHA-approved personal protective equipment (PPE). Refer to the SDS for complete safety precautions. The SDS is available by request or via download at avantigrout.com.
